

Build a Book About You for Apple II Series Computers

Welcome to *Build a Book About You*. Below are instructions for using the program on your type of Apple computer. The manual that you'll find in your package will describe in detail how *Build a Book* works, including specific printer information. After loading the program (see later), you should refer to the main manual for further instructions.

REQUIRED EQUIPMENT

To use *Build a Book* you will need:

1. an Apple II, II+, IIe, or IIC computer with a minimum of 48K
2. a black-and-white or color television with an RF modulator or a monochrome or color monitor
3. one disk drive
4. the *Build a Book* Program disk
5. a printer.

LOADING INSTRUCTIONS

Here's how to get *Build a Book* to run on your computer.

1. Insert your *Build a Book* Program disk into your disk drive.
2. Turn on your TV or monitor.
3. Turn on your Apple computer. The red light on the disk drive will go on and off several times as the program is loading.

That's it! You will soon see the title screens and then the program's Main Menu will appear.

COPYING THE PROGRAM

Before you begin to use *Build a Book*, you should make a copy of the Program disk and use the copy to create your story-books. Store the original in a safe place. To make a copy of the *Build a Book* Program disk, choose "Duplicate a Disk" from the main menu of your Apple IIc System Utilities disk or the COPY A program on the DOS 3.3 System Master Disk. Check your DOS User's Manual for further instructions.

YOUR PRINTER'S INTERFACE CARD

When you choose the PRINTER SETUP option, you will be asked first to select the type of printer you are using and then to choose the type of interface card you have. You will be given three choices of interface cards:

Parallel (no auto line feed control)

Parallel (auto line feed control)

Serial

If you have a serial printer, you must make sure that the auto line feed switch on your printer is set to the ON position. If your interface card has a switch to control the auto line feed, this, too, should be set to ON.

MISCELLANEOUS NOTES

- On the Apple IIe and IIc, you can use the up and down arrow keys in addition to the right and left arrow keys for moving among the menu options.
- To clear the ENTER OR EDIT screen of all information, hold down the Control (CTRL) key while pressing the C key.

- If you have a IIe or IIc and the text you are entering is all upper case, check to see whether your CAPS LOCK key is down. This is important because if it is, your printer will print your data in all caps, which you may not want.
- Although only upper case appears on the VIEW screen of the Apple II and II+ computers, *Build a Book* will print in upper and lower case, capitalizing all proper names.
